

# iPhone Software Unlock Guide!

[Make a Donation](#)

GUI Software released in beta! [Click Here!](#)

## Needed Files

[iBrickr](#)

[iUnlock](#)

[nor](#)

[ICE03.14.08\\_G.flis](#)

[minicom](#)

[minirc.dfl](#)

[bbupdater](#)

[WinSCP](#)

[putty](#)

Any problems with any files just chmod +x them this should do the trick!

## Software Unlock

First of all im gonna warn you make sure your running version 1.02 firmware.

**Settings → General → About → Version. Modem Firmware should also say 03.14.08\_G**

Your phone will also need to be jailbroken you can use [iBrickr](#) for this!

When you have [iBrickr](#) running install the following.

- **Community Sources**
- **OpenSSH**
- **BSD Subsystem** (might take some minutes)

Next Use [WinSCP](#) (root/dottie) and copy the the following files to **/usr/bin**

- [iUnlock](#)
- [ICE03.14.08\\_G.flis](#)
- [nor](#)
- [minicom](#)
- [bbupdater](#)

You can find your iPhones ip address by using the wifi settings and picking your network and hitting the blue arrow will reveal your ip.

Now make a folder under **/usr/** called **local/etc**

So you upload [minirc.dfl](#) to **/usr/local/etc**

Now using [putty](#) log back in with your login **root/dottie**

and run the following commands :

```
cd /usr/bin/
```

```
chmod +x iUnlock
```

```
launchctl unload -w /System/Library/LaunchDaemons/com.apple.CommCenter.plist
```

```
iUnlock ICE03.14.08_G.flis nor
```

Wait a while usually around 20minutes.

After this is complete in [putty](#) run

```
bbupdater -v
```

You should see issuing +xgendata... and a lot more stuff this is good!

now still in [putty](#) type

### **minicom**

When everything loads ok type AT it should respond with OK

If all is good issue these commands next

**AT+CLCK="PN",0,"00000000"**

**AT+CLCK="PN",2**

if it gives a response with 0 your unlocked!

Now just run this command in putty!

**launchctl load -w**

**/System/Library/LaunchDaemons/com.apple.CommCenter.plist**

**AND YOUR UNLOCKED!**

[Make a Donation](#)

**Thanks**

**Any problems [irc.osx86.hu](irc://irc.osx86.hu) and /msg HaRRo**
